

# Use Case

## Pankl Racing Systems AG and LOGINventory

Pankl Racing Systems AG, founded in 1985, develops and distributes high-tech mechanical systems in the high-tech sector for dynamic components in the worldwide niche markets in the racing, luxury automobile and aviation industries. Pankl Racing Systems AG operates in 10 countries at 18 different locations, employs almost 4,000 people and is a market-leading supplier of engine and drive systems.

In 2019, as part of a restructuring process, Pankl Racing Systems AG decided to implement the LOGINventory software for network inventory, IT documentation and for license management. Patrick Mang, Team Leader IT Support at Pankl Racing, who is responsible for this topic since 2019, reports on his experiences with LOGINventory.

### At a glance

LOGINventory offers:

- Quick and easy scanning of the entire IT network
- Simple management of decentralized IT structures
- Overview of licenses
- Detection of over- or underlicensing
- Automatic, agentless scan
- Compatibility with third-party systems
- Personal support

### Mr. Mang, what was the initial situation at Pankl Racing before LOGINventory was implemented?

Mr. Mang: Before LOGINventory, we had different programs at Pankl Racing Systems AG and also Excel lists in order to document the facts and circumstances of our IT inventory. In 2019, we introduced a new ticket system and also searched for a new inventory solution. It was important for us to find a centralized inventory system that automatically records data and creates individual reports. We then compared various providers and opted for LOGINventory. One of the reasons was that LOGINventory could be easily integrated into our existing ticket system. We now manage around 4,000 assets with LOGINventory.

„LOGINventory is easy to use [...]. I couldn't really think of anything that could be improved.“

**Patrick Mang, Team Leader IT-Support at Pankl Racing**

### What advantages does LOGINventory offer you?

Mr. Mang: Our advantage is that LOGINventory can be easily adapted to our individual needs. We have personalized the data queries in LOGINventory and will continue to do so in the future. For example, we have integrated our own robotics into the system, which sends us an email every day with the current queries. We also use automatic user assignment, for example, to know immediately which user is using which device. And, as already mentioned, LOGINventory is integrated into our ticket system. So quite a few benefits!

### For which tasks or evaluations do you use LOGINventory today?

Mr. Mang: We use LOGINventory IT-wide across all our locations for a wide variety of tasks:

- For IT support as a reference work in relation to client replacement, software installation
- To analyze which devices have which software packages installed
- To check whether the anti-virus scanners are up to date

- As a hygiene tool to find out which devices have been offline for more than 180 days and have not been inventoried since then
- As a system for recording KPIs, e.g. which Windows 10 versions we have in use, etc.

### Any last words on LOGINventory?

Mr. Mang: All in all, I have to say that we are totally happy with LOGINventory. As I mentioned at the beginning, you can create individual queries and hierarchies yourself and put them together relatively quickly. LOGINventory is easy to use, so no special training is required. I can't really think of anything that could be improved.

### Contact us

Are you interested in LOGINventory? Please feel free to contact us.  
We look forward to hearing from you!
